REJECTION OF CLAIMS ON FORMAL MATTERS

The following is a quotation of the second paragraph of 35 U.S.C. 112:

The specification shall conclude with one or more claims particularly pointing out and distinctly claiming the subject matter which the applicant regards as his invention.

Claims 6-8 are rejected under 35 U.S.C. 112, second paragraph, as being indefinite for failing to particularly point out and distinctly claim the subject matter which applicant regards as the invention. With reference to claim 6, the claim preamble specifies that the fitting has a fitting body having a support shell “for supporting the end of a tube adapted to be connected thereto”. Inferentially claiming the “tube” renders the subject matter indefinite and vague because it is unclear whether or not the fitting includes the tube. Further, with reference to claim 6, line 4, failure to provide antecedence for “fitting body support shell” renders the subject matter indefinite.

REJECTION OF CLAIMS OVER PRIOR ART

Claims 3-8 are rejected under 35 U.S.C. 103(a) as being unpatentable over Wang (6,331,186). Illustrated by Wang is a press shell comprising a tubular shell body 16 or 18 (see Figure 1) of a polymer (see column 5, lines 27, or claim 8, for example) and a solid lubricant 30 (see column 4, lines 15-25, for example). Wang’s polymer press shell material is considered equivalent to the claimed non-iron metal or non-iron metal alloy press shell since applicants’ own disclosure indicates that plastic can be an alternative shell material (see paragraphs [0005] and [0006]). Accordingly, the shell material is preferential as long as a sliding effect is provided on the shell (see paragraph [0010]). Wang’s tubular shell body 16 or 18 is defined by an “inner substantially right-cylindrical surface and an outer substantially right-cylindrical surface each

terminating at opposite terminal substantially annular axially oppositely facing surfaces". As to claims 4, 5, 7 and 8, the solid lubricant 30 coats the entire outer surface of the tubular shell body 16 or 18 from end to end of the tubular shell body. With reference to claim 6, Wang shows a fitting comprising a fitting body having a support "shell" 14 (stent) for supporting a tube end 12.

RESPONSE TO APPLICANTS' COMMENTS

Applicants' comments have been carefully considered, however, they are moot in light of the new grounds of rejection, such rejection being necessitated by applicants' Amendment.

FINAL OFFICE ACTION

Applicant's amendment necessitated the new ground(s) of rejection presented in this Office action. Accordingly, **THIS ACTION IS MADE FINAL**. See MPEP § 706.07(a). Applicant is reminded of the extension of time policy as set forth in 37 CFR 1.136(a). A shortened statutory period for reply to this final action is set to expire **THREE MONTHS** from the mailing date of this action. In the event a first reply is filed within **TWO MONTHS** of the mailing date of this final action and the advisory action is not mailed until after the end of the **THREE-MONTH** shortened statutory period, then the shortened statutory period will expire on the date the advisory action is mailed, and any extension fee pursuant to 37 CFR 1.136(a) will be calculated from the mailing date of the advisory action. In no event, however, will the statutory period for reply expire later than **SIX MONTHS** from the date of this final action.
